Build machines and operate
systems more efficiently
Build it in.

Powering Business Worldwide

Energizing a world that demands more.

We deliver:

- **Electrical solutions** that use less energy, improve power reliability and make the places we live and work safer and more comfortable
- **Hydraulic and electrical solutions** that enable machines to deliver more productivity without wasting power
- **Aerospace solutions** that make aircraft lighter, safer and less costly to operate, and help airports operate more efficiently
- **Vehicle drivetrain and powertrain solutions** that deliver more power to cars, trucks and buses, while reducing fuel consumption and emissions

Discover today's Eaton.

Powering business worldwide

As a global power management company, we help customers worldwide manage the power needed for buildings, aircraft, trucks, cars, machinery and businesses.

Eaton's innovative technologies help customers manage electrical, hydraulic and mechanical power more reliably, efficiently, safely and sustainably.

We provide integrated solutions that help make energy, in all its forms, more practical and accessible.

With 2014 sales of \$22.6 billion, Eaton has approximately 100,000 employees around the world and sells products in more than 175 countries.

Reducing complexity for more compact, cost-optimised machines.

Customer expectations today are focused on increased performance in a more compact design, shorter delivery times, and the right price. To meet these requirements, machines need to be built in shorter time frames, using smaller control cabinets with intelligent, energy-saving devices that allow a smaller machine footprint.

SmartWire-DT is a unique wiring solution that streamlines connection and communications inside and outside control panels.

Machine builders globally are finding that SmartWire-DT can be integrated easily into machines in a smaller control cabinet, reducing the time and effort for wiring their machines by up to 85%.

Build it in.

Reducing wiring costs by 85%

More compact machines with Eaton controllers

For small and medium machines, Eaton offers HMI/PLCs, compact PLC and control relays with integrated SmartWire-DT communication interface. This offers machine builders the opportunity to develop simpler, and even more compact automation solutions.

Simplify wiring. Reduce costs.

Today, control wires are used to connect devices like switchgear or pilot devices to PLC I/O-modules. Using SmartWire-DT, these modules and the control wiring becomes obsolete. All devices are connected to this intelligent wiring system, reducing engineering and installation costs for the machine builder, and optimizing machine maintenance and availability for the customer.

Less complex, more compact machines

Eliminating the PLC I/O and the control wiring means more compact control panels and machines, and makes automation structures simple to design and configure.

Simplified connectivity

By replacing conventional, time-consuming control circuit wiring with one single cable, SmartWire-DT enables the simple connection of switchgear in control panels, as well as sensors and actuators outside control panels. This results in safe and error-free switchgear installations combined with significantly shorter commissioning times.

Higher flexibility

With industrial fieldbus gateways, SmartWire-DT can be connected to PLCs from any manufacturer, giving the machine builder the flexibility to meet customer demand more easily.

Extended communication improves system effectiveness.

Plants need multiple drives, control and pilot devices to be designed, installed and controlled, along with distributed sensors and actuators. Automation of the process environment can be quite challenging, especially if continuous process availability is required. SmartWire-DT is an intelligent wiring system that provides more data on installed devices, central to increased availability and preventive maintenance.

More data, increased availability

More detailed information enables better process control, more detailed diagnostics, reduced downtime and increased availability. SmartWire-DT switchgear devices provide continuous real-time data information on motor load conditions that allows an interaction before an overload situation occurs and the system stops. Monitoring motor current values also helps with preventive maintenance.

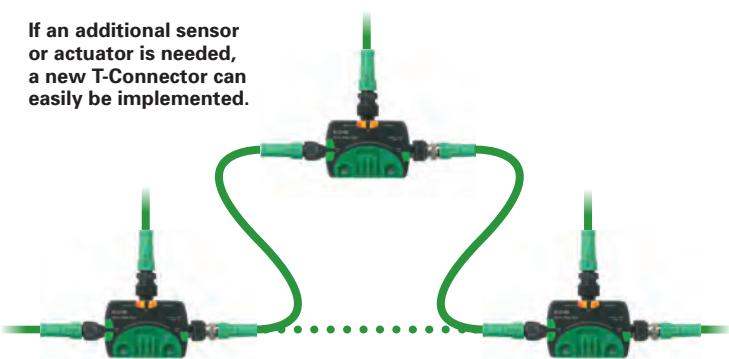

Compliant to industrial fieldbus standards

With industrial fieldbus gateways, SmartWire-DT can be connected to PLCs from any manufacturer and existing installations can be easily extended.

Easy expansion

SmartWire-DT makes it easy to add expansions during operation. New devices are simply connected to the communication cable inside or outside the control panel. An overall length of up to 600m simplifies distributed control architectures.

If an additional sensor or actuator is needed, a new T-Connector can easily be implemented.

Build it in.

Optimized availability increases profitability

Compliant to all industrial fieldbus standards

Up to 99 devices installed along 600m

Intelligent devices at the heart of Industrie 4.0

Intelligent devices and open communication standards are essential to solutions true to an Industry 4.0 vision. They have to be able to communicate with every controller within an open architecture while also controlling specific distributed processes independently.

With its SmartWire-DT platform and intelligent devices, Eaton brings the vision of Industry 4.0 to life. These intelligent devices help engineers to run their businesses on a lean, smart and efficient basis and take another step toward implementing complete Industry 4.0 solutions.

Intelligent Motor Control Centre with SmartWire-DT®

With motor control centers, SmartWire-DT replaces all control wiring in the corresponding withdrawable units. Mounting is simplified, wiring reduced and space saved. The information the MCC delivers with SmartWire-DT helps minimise system downtime.

One system, countless possibilities.

SmartWire-DT enables distributed intelligence that changes automation. Interface modules installed on standard switchgear replace the digital and analog I/O layer on PLCs. Gateways to any industrial fieldbus make it not just possible, but simple to access the SmartWire-DT network independent of the PLC system. At the same time, SmartWire-DT technology is available as an integrated part of our controllers. The result: easy-to-configure, linear automation structures with few components.

Powerful technology

Up to 99 devices can be connected on a single SmartWire-DT line. The maximum permissible total length is 600m, while the maximum data volume for cyclic process data is 1,000 bytes. The SmartWire-DT cable also includes the required power supply for the SmartWire-DT electronics as well as for installed contactors.

Flexible integration in every automation environment

Fieldbus gateways are used to connect the SmartWire-DT communication system to your individual PLC system. SmartWire-DT can communicate via industrial fieldbus using standardised mechanisms for configuring and parameter setting.

SmartWire-DT modules

Two different types of SmartWire-DT modules are available. Special function modules replace the electrical interfaces of contactors, pushbuttons, pilot devices and auxiliary switches. Intelligent devices like electronic motor protective devices, softstarters and drives transmit digital and analog information (e.g. current, overload..) directly onto the SmartWire-DT network.

Features

SmartWire-DT coordinators

Touch display

with SWD master and PLC function
3.5", 5.7", 7", 10" or 15" TFT-LCD screen,
additional field bus interfaces, Ethernet, WEB server

Compact controller

with SWD master
additional fieldbus interfaces, Ethernet, WEB server

Control relay

with SWD master

Gateways

Connection of SmartWire-DT to fieldbus
(e.g. CANopen, Profibus, Profinet ...)
Supply voltage for the SmartWire-DT modules
Feeder unit for the control voltage for the motor starter
or contactor
Support of up to 99 SmartWire-DT modules

SmartWire-DT modules

I/O modules to connect digital and analog input/output signals in IP20, IP67 degree of protection
DS7 Soft starter with integrated SWD interface

Function element to connect to:

- Pilot devices RMQ-Titan
- SL4/7 signal tower
- Contactor DILM
- Motor-protective circuit-breaker PKZ/PKE
- PKE32,65 circuit-breaker
- NZM2,3,4 circuit-breakers
- Miniature circuit breaker (MCB)
- DE1 Variable speed starter
- DC1, DA1 variable frequency drives
- XNH fuse switch-disconnector

SmartWire-DT accessories

Several connection elements are necessary to ensure the SWD line function

- Power feeder module
- SWD cables
- SWD housing and switch cabinet bushings
- Plugs and plug-in connections
- Links
- Couplings, cable adapters
- Bus termination resistors
- Tools
- Programming accessories

 www.eaton.eu/rmq

Features

SWD RMQ connection for front mount

- Adaptation with standard adapter M22-A or M22-SWD-A4 for 4-way selector switch/pushbutton and joystick.
- Combination with standard pilot devices of the RMQ-Titan M22 series.
- Types with one or two change-over contacts and with/without integrated LED element.
- LED elements in four colors.
- Function elements for connecting to potentiometer / encoder
- SWD diagnostics LED for signaling the communication status of the function element.
- Connection to SWD ribbon cable line with external device plug.

SWD RMQ connection for base fixing

- For use with SWD card, RMQ-Titan surface mounting enclosure and RMQ-Titan M22 pilot devices.
- Types with one or two change-over contacts and with/without integrated LED element.
- LED elements in four colors.
- SWD diagnostics LED to signal the communication status of the function element

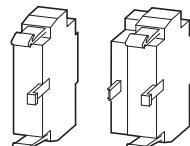

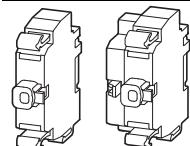

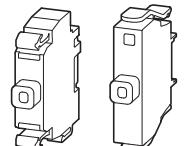

SWD card for function elements

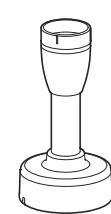

- Connecting SWD function elements for base fixing
- Type with 1, 2, 3, 4 and 6 slots.
- Bridging of free slots with links for base fixing.
- Integrated connectible bus termination resistor
- Connection to 8 pole SWD round cable via terminals or plug-in with enclosure bushing

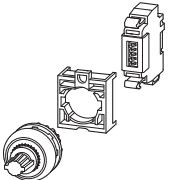

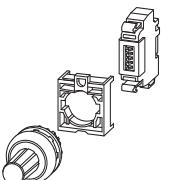

SWD connection - base module for signal tower SL4/SL7

- Connection to SWD ribbon cable line with blade terminal.
- Actuation of up to 5 signal modules.
- 24 V DC supply of the signal modules via SWD ribbon cable or separately.

Features

SWD contactor modules

- Suitable for contactors DILM7(24VDC)...DILM38(RDC24), DILMC7(24VDC)...DILMC32(RDC24), DILA, DILMP20(24VDC)...DILMP45(RDC24)
- Use of the standard accessories in the xStart series
- Suitable for contactor combinations with PKZ or with Z overloads
- Integrated switch position polling
- Integrated mechanical switch position indication
- Contactor actuation
- SWD diagnostics LED for signaling communication status and signaling the switch command via SWD
- Two independently fed digital inputs for scanning potentially isolated contacts, such as motor protective circuit-breaker auxiliary contacts.
- Connection to the SWD ribbon cable via external device plug

SWD input/output modules

- Digital module with four 24 V DC digital inputs and two relay outputs for actuating DILM40...DILM72 contactors.
- Connection to the SWD via external device plug.

Safety technology for SWD contactor modules and SWD PKE module (motor starter)

Controlled stop switch off as per IEC/EN 954-1, switching category 3; EN ISO 13849-1 PL d; IEC 62061 SIL 2.

Switching off control voltage centrally at the gateway or power feeder module

Can be combined with safety-oriented switchgear.

Power feeder module

- SWD supply voltage incoming unit.
- 24 V DC supply voltage incoming unit for activation of the contactors.
- Assembly of controlled stop groups.

SWD PKE module (motor starter)

- Suitable for motor starters MSC-DEA-...(24 V DC) or DILM(C)7 -DILM(C)32 in combination with PKE12/32 and trip block PKE-XTUA-...
- Use of the standard accessories in the xStart series
- Integrated mechanical switch position indication of the contactor state
- Integrated switch position polling
- Integrated mechanical switch position indication
- Transmission of PKE-specific data (PKE contactor state, relative motor current, thermal motor image, trip indications (overload, short-circuit,...), type PKE trip block, set value overload release and time-lag class).
- Communication cable (PKE32-COM) for connection to PKE trip block included as standard.
- Contactor actuation
- Selectable overload relay function (switches off the contactor in the event of an overload)
- SWD diagnostics LED to signal the communication status of the module and to signal the switching command via SWD
- Hand/Auto functionality for automatic or manual switching-on of the connected contactor.
- Connection to the SWD ribbon cable via external device plug

SWD PKE module (motor-protective circuit-breaker)

- Can be fitted to PKE12, PKE32, PKE65 motor-protective circuit-breaker with PKE-XTUA... trip block
- Use of standard accessories for PKE motor-protective circuit-breaker
- Transmission of PKE-specific data (switch position PKE, relative motor current, thermal motor image, trip indications (overload, short-circuit,...), type PKE trip block, set value overload release and time-lag class)
- Remote tripping of PKE motor-protective circuit-breaker
- SWD diagnostics LED for signaling of the communication status
- Connection to the SWD ribbon cable via external device plug

SWD PKE module (circuit-breaker)

- Can be fitted to PKE32, PKE65 motor-protective circuit-breaker with PKE-XTUACP... trip block.
- Use of standard PKE accessories
- Transmission of PKE specific data: PKE contactor state, relative phase current (L1 ...L3), thermal pattern, trip indications (overload, short-circuit, ...) trip block type, value set for overload trip and shortcircuit release
- Remote tripping of PKE motor-protective circuitbreaker
- SWD diagnostics LED for signaling of the communication status
- Connection to SWD flat band conductor via external device plug.

Electronic motor starter EMS with SWD

- Motor direct start
- Motor reverse start
- Motor protection
- Useable up to 3 kW rated motor output
- Transmission of EMS specific data: operating direction, relative motor current, absolute motor current, thermal motor pattern, tripped messages (overload, phase failure,...), device type, value set for overload trip
- Overload pre-warning
- Remote reset after overload trip
- Remote configuration of the set motor current
- SWD diagnostics LED for signaling of the communication status
- Connection to the SWD ribbon cable via external device plug

Electronic EMS motor starter for controlled stop with SWD

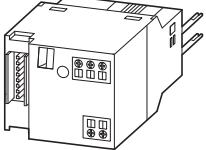

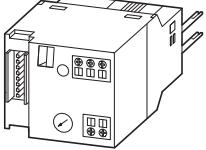

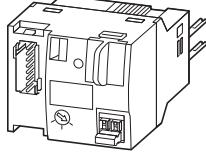

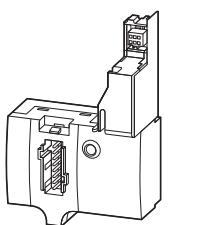

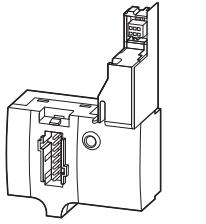

- Motor direct start
- Motor reverse start
- Motor protection
- Controlled stop via additional terminal up to SIL3/PLe.
- Useable up to 3kW rated motor output
- Transmission of EMS specific data: operating direction, relative motor current, absolute motor current, thermal motor pattern, tripped messages (overload, phase failure,...), device type, value set for overload trip
- Overload pre-warning
- Remote reset after overload trip
- SWD diagnostics LED for signaling of the communication status
- Connection to the SWD ribbon cable via external device plug

System overview

- 1 Soft Starter DS7
- 2 SWD ribbon cable, 8 pole
- 3 SWD external device plug, 8 pole

The DS7-...-D soft starters are designed for connection to SmartWire-DT. These two-phase-controlled soft starters control three-phase motors for applications with normal operating frequency in the performance range from 4 to 200 A (1.5 to 110 kW at 400 V mains voltage). Due to Eaton's special control method the true run behavior of a DS7 can be compared with that of three-phase soft starters.

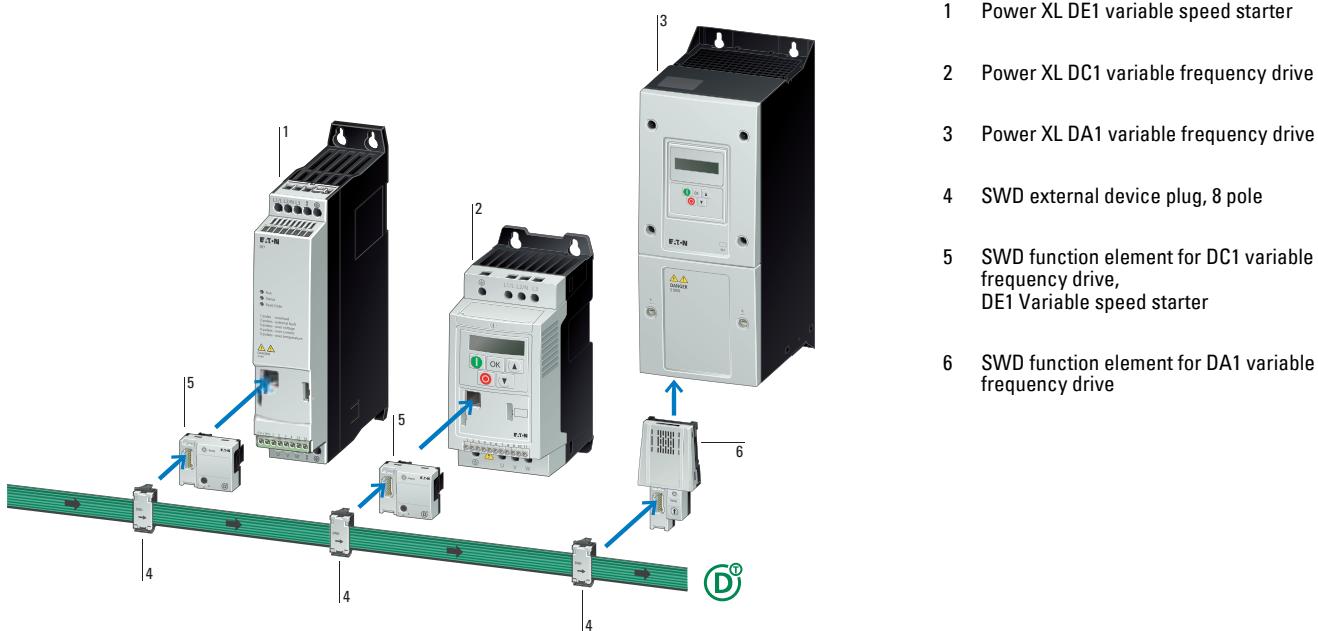

www.eaton.eu/ds7

SmartWire-DT provides a direct connection to the DS7, without control signal wiring. Through SmartWire-Darwin the PLC transmits all control signals directly to the soft starter. The device data are available for processing in the master control system without additional configuration. The connection with SmartWire-DT is fast, easy, inexpensive and convenient.

System overview

PowerXL DE1 variable speed starter

The PowerXL DE1 variable speed starter offers simple handling and highest reliability while at the same time variable motor speed and improved energy efficiency of the machine. This new device class closes the loop between conventional motor starters and variable frequency drives.

- Performance range 0.25 - 7.5 kW
- Connection to SmartWire-DT via SWD module DX-NET-SWD3

PowerXL DC1 variable frequency drive, Compact Machinery Drive

The compact PowerXL DC1 variable frequency drive is particularly well-suited for use with simple pump, fan, and conveyor belt systems. It can be quickly and easily configured and commissioned, resulting in tangible savings.

- Performance range 0.37 - 11 kW
- Connection to SmartWire-DT via SWD module DX-NET-SWD3

PowerXL DA1 variable frequency drive, Advanced Machinery Drive

The PowerXL DA1 variable frequency drive, designed for the machine and system building industry, is characterized by its enormous flexibility in terms of communications protocols, a function block editor (PLC) that makes it possible to configure the drive as necessary for specific applications, and a powerful vector control mode for highly dynamic applications.

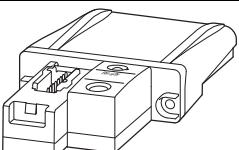

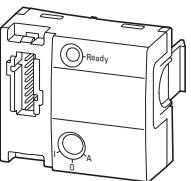

- Performance range 0.75 - 250 kW
- Connection to SmartWire DT via SWD module DX-NET-SWD1

SWD modules DX-NET, for connecting to variable speed starter and variable frequency drive

- Reading and writing cyclic and acyclic data
- Complete command volume for controlling the variable frequency drive
- Complete command volume for configuring the variable frequency drive
- Complete access to status, error and diagnostic messages
- Fast and fault-free wiring with plug-in units

System overview

SWD module for circuit-breakers and residual current circuit-breakers

The SmartWire-DT auxiliary contact module makes it possible to easily connect a circuit-breaker, fault current switch or combination protective switch to the SmartWire-DT line using plug-in connection and to in this way easily and quickly integrate the protective switching devices. This makes the I/O level redundant and at the same time the information is implemented in the controllers and the drives. With the SmartWire-DT auxiliary contact, the states ON, OFF and triggered (as a result of a fault) can be transmitted.

SWD module for XNH fuse switch-disconnector

The XNH-SWD... SmartWire-DT module makes it easy to integrate XNH switch-disconnectors into the SmartWire-DT communication system.

It transmits both the corresponding switch position indication state and the trip indication.

There is a second version to which current transformers can be connected as well, making it possible to transmit the three-phase currents too.

SWD-Assist can be downloaded for free from our website:
www.eaton.eu/swdassist
Planning and ordering tool

Achieving results quicker using SWD-Assist:

.. Planning .. Engineering .. Commissioning

The SWD-Assist software supports you to plan, configure and put a SWD network into operation. Not only does it offer planning and configuration functions, but the network can be easily initialized using the SWD coordinator diagnostics interface.

SWD-Assist contains the following functions:

Offline:

- Easy design of SWD networks
- Validity check while automatically adding missing components
- Creation of project-specific field bus description files (e.g. Profibus, Profinet)
- Print-out of the SWD network

Online:

- Importing installed network configurations
- Verifying correct installation (target-actual configuration comparison)
- Display process data of digital and analog inputs and outputs
- Wiring test (setting outputs in the stop position of the controller)
- Display of fault messages for easy fault diagnostics

SmartWire-DT in system applications.

Putting power into potato-sorting

SmartWire-DT helps to increase productivity and uptime and simplify maintenance for end users, reducing engineering time and increasing flexibility when designing, installing and commissioning plant.

Background: German company Schaltanlagenbau Gormanns GmbH was responsible for the electrical power supply and drives in a fully automated potato sorting plant that was part of an extensive new building project.

Challenge: The plant, designed to process 120 tons of potatoes per hour, had to be up and running on time for harvesting season and needed to be simple to operate. The project required the installation of 250 drives for conveyor belts, pumps, fans and machines as well as 50 command points.

Solution: Eaton's SmartWire-DT intelligent wiring system meant project completion in just four months, with wiring reduced to an eighth of a conventional wiring solution. Cross wiring was reduced from 1km to 50m, and the cabling required for the control circuit devices on the machines reduced by around 40%.

Results

"I was sceptical about whether SmartWire-DT could do what it promised," says Sebastian Gormanns, Managing Director at Schaltanlagenbau Gormanns GmbH. "I have seldom seen anything so simple. Instead of the two weeks required for commissioning our previous sorting plant project, we only needed 1.5 days with this project. And when a problem comes up, we can explore the system remotely, diagnose and correct it."

Tapping into efficiency

Background: Acque del Basso Livenza S.p.A. runs one of the largest purification plants in Italy, serving over 140,000 customers in nineteen municipalities. The company has always been committed to offering its customers a high standard of service efficiency and quality, as well as facing the challenges posed by recent liberalization of water supply services and the resulting competition.

Challenge: The plant is entirely automated and operates in a continuous cycle. So whenever one of the motors or pumps in a plant malfunctions, off-site technicians need to be notified of the event and need to be on call 24 hours a day. Problems reduce overall plant productivity and involve considerable personnel management costs.

Solution: Using SmartWire-DT, the company can remotely control each single piece of machinery in the plant. A remote connection via VNC enables technicians to monitor in real-time the amount of current absorbed by each motor and, in the event of overload or a technical stop, immediately re-energise the motor simply by tapping the screen of a tablet or smartphone.

Breaking new ground

Background: Austrian contractor Keckelis was engaged to upgrade a crusher and screening plant operating in harsh conditions that undermined optimal productivity.

Challenge: When starting iced-up elevating conveyors in cold temperatures, frozen water in the belt pockets can cause motor currents to overload, shutting down the conveyor and requiring a restart.

Solution: After upgrading the sand and gravel plant with SmartWire-DT, the iced up belt can be automated to 'run warm' until the operating current has dropped to 'idle running', and only then is material conveying enabled. Accidental material conveying and excessive warm running are prevented. A far greater benefit is the controlled operation of the plant close to its maximum output limit for optimized and safe plant operation.

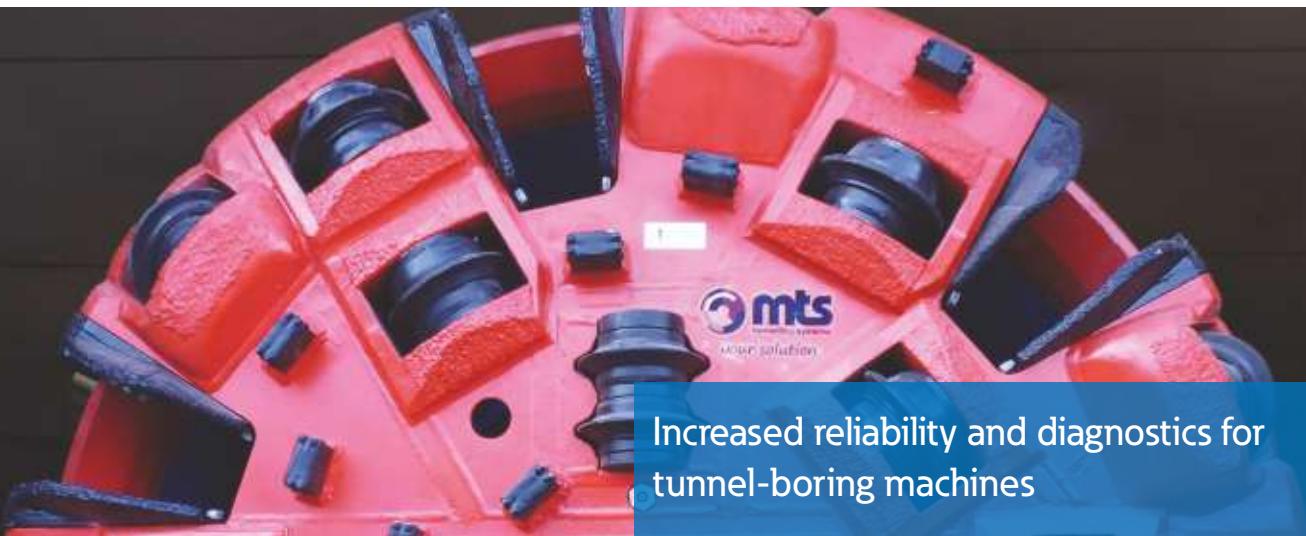

Results

The new system has radically changed plant management for the company in terms of efficiency, productivity and personnel management costs.

Results

"Using SmartWire-DT in combination with Eaton's PKE electronic motor protection has not only paid for itself very quickly in terms of investment but also in terms in system availability. As well as the neat and extremely fast wiring of SmartWire-DT, its space-saving design was ideal for the limited space available in the control room," says Manfred Keckelis, general manager at Keckelis Elektrotechnik.

SmartWire-DT in machine applications.

Increased reliability and diagnostics for tunnel-boring machines

SmartWire-DT can help to reduce installation cost by up to 85%, increase commercial flexibility and machine availability whilst providing MOEMs and customers with rich data from their machines, leading to intelligent decision-making that maximizes the potential from Industrie 4.0.

Background: German company mts Perforator develops and manufactures tunnel-boring machines for trenchless pipe jacking of supply and disposal tunnels, as deep as 40m below the ground.

Challenge: In remote underground environments, where precision and reliability of operation are vital, conventional point-to-point control wiring of components such as switching devices, sensors and actuators carries the risk of errors and malfunctions.

Solution: Using SmartWire-DT, mts benefits from a considerably faster assembly, fewer errors and less risk of manipulation, along with detailed remote diagnostic functions. The combination of PKE and SmartWire-DT delivers enhanced drive monitoring, with process-relevant data monitored continuously and analyzed without costly analog I/O technology.

Results

The company is able to monitor the current states of the 50 tunnelling machines presently in operation worldwide. It can quickly carry out remote diagnostics in the event of a fault, provide a solution and ensure improved system availability for end customers.

"Eaton's smart devices enable us to implement detailed data access worldwide down to the field level," says Norbert Simdon, working in electronic support at mts.

Cleaner wiring solution

Background: US-based Renegade Parts Washers manufactures heavy-duty parts washing machines for numerous applications. Founded in 1996, the company has grown from offering a single solution to now having the capability to manufacture customized solutions built to their customers' specifications.

Challenge: Customers depend on a solution that will quickly and efficiently clean a high volume of parts and demand the shortest lead time between production and final end-user installation. With the increasing complexity of its machines, Renegade was looking for ways to optimize its production processes.

Solution: A machine control system based on the SmartWire-DT communication system cut wiring time, improved flexibility, and supported the implementation of advanced diagnostic features. This meant simpler machines at a lower cost and with added functionality. Extension up to 600m outside the control panel also allowed the connection of sensors and other machine-mounted devices.

Packed with benefits

Background: Macchi SpA is a leading Italian manufacturer of plastics processing equipment. The company produces plastic stretch-wrap film widely used for packaging in almost every industry, typically for wrapping pallets loaded with products.

Challenge: Macchi needed to develop a control system for the extruders, coil winders and cutters on a sophisticated new film-manufacturing machine that helps to cut end user costs and delivers significant environmental advantages through using less film.

Solution: SmartWire-DT wiring technology brings important benefits, including a smaller control cabinet, reduced wiring complexity and easier testing. Significant time savings in the manufacture, testing and commissioning of the machine were achieved, and the flexibility of the SmartWire-DT system makes it easy to incorporate future upgrades and modifications.

Results

"SmartWire-DT has transformed our control systems," says Dave Barney, owner of Renegade Parts Washers. "It has allowed us to cut our wiring times while improving the flexibility of our systems and adding advanced diagnostic facilities that are a big selling point when we talk to our customers. We'll certainly be using SmartWire-DT on all of the automated machines we build in the future."

Results

"The project has been a great success," says Mauro Andreoli, Sales Manager at Macchi. "We expect to be using SmartWire-DT technology again in the very near future, and consider it to be a big and very important step forward in control system technology."

At Eaton, we're energized by the challenge of powering a world that demands more. With over 100 years experience in electrical power management, we have the expertise to see beyond today. From groundbreaking products to turnkey design and engineering services, critical industries around the globe count on Eaton.

We power businesses with reliable, efficient and safe electrical power management solutions. Combined with our personal service, support and bold thinking, we are answering tomorrow's needs today. Follow the charge with Eaton. **Visit eaton.eu.**
