

REPLACEMENT LIGHTING FOR STRATFORD COUNCIL POOL COMPLEX

The TSB Pool Complex in Stratford, Taranaki is a heated indoor pool facility comprising 7 25-metre lanes, open all year round. The Pool Complex offers a range of activities, from swim squads and adult fitness activities to holiday and aquatic programmes.

Owned by Stratford District Council, the Pool Complex needed to replace and update their indoor lighting.

What we did:

In early 2015 EllisCo were commissioned by Stratford District Council to propose a lighting solution and upgrade due to concerns with maintenance and functionality of the existing lighting. The concerns included the advanced age of the luminaires as well as poor illuminance and uniformity levels.

However, the overriding issue was with the difficulty in maintaining the fixtures as they were located directly above the pool. With these challenges in mind as well as the severe pitch of the pool roof, EllisCo proposed using 150W LED Linear Highbays to replace the existing 400W metal halide box type low bays.

The outcome:

Due to EllisCo's decision to provide LED Highbays, broad linear light distribution, energy efficiency, long life and robust construction were just some of the benefits resulting in less maintenance required.
