Danfoss

Selection Guide | VLT® Soft Starter

Improve uptime, save energy
and **protect motors** effectively

Soft starters generate

zero
harmonics

so you can forget
about filters and
screened cables

www.vlt-drives.danfoss.com

VLT[®]
THE REAL DRIVE

When to use a soft starter

Need more uptime and less maintenance? Then install a soft starter on your direct-on-line (DOL) or start-delta installation.

Payback is fast and you get these additional benefits:

- Lower inrush current reduces mechanical stress – and minimises penalty from the utility company
- Extended system lifetime due to reduced wear on
 - Motor
 - Power cables
 - Electrical distribution system
- Reduced water hammer in pump applications. For more application benefits, see pages 4 and 5.
- After start-up, you can bypass the soft starter, switching over to run direct-on-line.

After initial start-up, running DOL saves energy, by reducing losses and thus reducing cooling requirements. Danfoss provides an easy solution for switching back and forth to DOL – the VLT® Soft Starter MCD 500 with integrated bypass.

More protection, less space

Select a Danfoss soft starter to win unique benefits:

- Care for your motor and soft starter – get good motor and soft starter protection value, with more protection features in the soft starter.

- Save panel space with a very compact footprint
- Integrate the soft starter with VLT® frequency converters
- Programme the soft starter via your PC using the VLT® Motion Control Tool MCT 10 set-up software*
- Enjoy the integrated bypass as standard for MCD 500 ratings up to 961 A

**Requires optional USB module*

Why use a soft starter for speed control?

Forget harmonics

Variable speed drives (VSD) work by changing the frequency input to the motor – and this causes harmonics on the supply network. Harmonics do not affect the VSD itself. However, if not kept under control, harmonics can reduce performance and reliability of other equipment connected to the grid, such as generators and circuit breakers. The solution is to install filters and screened cables but even then the harmonic effect is not completely removed.

Therefore it's reassuring to know that a soft starter already fulfils all emission and immunity requirements laid out by the EMC directive. The soft starter does not change the frequency and

therefore does not generate harmful harmonics. So when using a soft starter there is no need to consider harmonics at all.

Reduce torque and current

Using a soft starter you can adjust torque to the exact level required, whether or not the application is loaded. By reducing the starting torque, mechanical stress on equipment is alleviated, saving on service and maintenance costs.

The soft starter also reduces starting current which means you can avoid voltage drops in the network.

Save cost

Soft starters cost up to one-tenth the price of high-power drives. So if your control requirements are covered by limiting current only at start and stop, with no need for constant acceleration and torque control, then there are significant savings to be won.

Save space

Soft starters are smaller than VSDs and the difference becomes more significant the higher the amp rating gets. You can save on panel space.

Integrated bypass – for all-round savings

The VLT® Soft Starter MCD 500 provides an integrated bypass to allow direct-on-line operation as an alternative. The integrated bypass offers multiple cost-saving benefits.

Reduce heat loss

Integrated bypass provides the opportunity to switch over to direct-on-line operation, after initial start-up via the soft starter. By running partially direct-on-line, you win the advantages of reduced losses and need for heat dissipation, thus saving energy due to decreased cooling requirements.

Save space

The MCD 500 with integrated bypass takes up less panel space than a soft starter with an external contactor.

Save time

With only six terminals instead of twelve, it is much faster to wire an MCD 500 with integrated bypass, than an alternative soft starter with external contactor. Less cable is required, which additionally reduces cost.

Save even more time, by using the handy set-up software tool MCT 10 to configure the MCD 500 via PC. You can use the same set-up tool with VLT® frequency converters.

Save energy – fast payback

The soft starter with integrated bypass contactor saves space by comparison to an external contactor connected to a non-bypassed unit.

Select a soft starter with integrated bypass when you want to save costs. The payback time is just months, using the MCD 500 with integrated bypass. See how in this example:

Example

In the example, a soft starter regulates a water pump, with motor specifications as follows:

Motor

Supply.....	400 V AC
Rating.....	132 kW
FLC.....	245 A
Start duty.....	300% for 30 seconds
Electricity prices.....	(industry – EU)

Estimated savings non-bypassed vs bypassed:

Save more with bypass, compared to no bypass.

The energy saved depends on the relationship between ramping and running.

The more the application is running the more the bypass will save – see illustration.

Cost saving using a bypass, showing the beneficial savings effect of increased running time and reduced ramping time.

Integrated bypass vs external bypass

Win back your investment faster with integrated bypass, compared to external bypass. The payback period is only a few months.

Investment (indexed values)	No bypass, Direct-on-line	Soft starter with external bypass	Soft starter with integrated bypass MCD 500
Soft starter	100	100	137
Bypass contactor + wiring + mounting	0	58	0
Extra panel space, parts, and labour	0	3	0
Total	100	161	137
Extra cost compared to no bypass	-	61	37
Simple payback period [months]	-	3.3	2

Applications

Centrifugal pump – Water

Need to reduce water pressure surges and mains supply disturbance at start-up? Then a gentle start using a soft starter is a good idea. It also provides a soft stop to control the effects of fluid hammer often associated with uncontrolled pump stop – ultimately extending pump life and reducing running costs. For new projects, build these savings in at design phase – there is no need to specify pressure surge tanks and motorised valves to cater for repetitive high-pressure surges. The minimum start current function reduces electrical disturbance on mains supply and limits demand on supply as well – reducing reticulation costs for example in farmland irrigation projects.

The soft starter

- Prevents motor overheating via integrated protection
- Ensures that pump does not run in reverse, via start-up protection
- Detects blocked pipes or lack of fluid via undercurrent protection, thus preventing unnecessary pump damage

Centrifugal fan – HVAC

Extend the life of centrifugal fans by adding a soft starter – to ensure gentle acceleration and deceleration, minimising wear on coupling, belts, and bearings.

The soft starter

- Reduces electrical disturbance on the supply via a minimal start current
- Prevents overheating of motor windings and body
- Prevents starting when fan direction is reversed, avoiding damage
- Trips in the event of excess start time, indicating a jammed or stalled fan, also providing early indication of bearing failure
- Detects broken couplings and belts or clogged fan filter, via and optional trip or flag for motor undercurrent

To integrate the soft starter directly with a BMS, the MCD 500 supports monitoring fan loading, without the need for extra equipment an analog output.

Compressor – Protect your motor

Has the compressor ever locked up, for instance due to entry of liquid ammonia? Using a soft starter, on-going monitoring prevents damage to motor, compressor, and couplings in a lock up situation. Soft starters provide instant protection against motor overload, by tripping the motor immediately.

The soft starter

- Enables load shedding before the soft starter trips, for compressor overload or motor overtemperature
- Trips to prevent motor damage when start-up time exceeds a pre-programmed limit, for example due to a jammed or stalled compressor
- Monitors the compressor load using a 0-20 mA/4-20 mA analog output
- Enables optimised compressor performance with dual speed dahlander motor control
- Avoids short cycling via restart delay, promoting longer life of motor, compressor, and coupling
- Is an easy retrofit for start/delta starters

Conveyor belt – Food and beverage industries

Extend the life of your conveyor belt, and gain the benefit of consistent start-up regardless of whether the belt is loaded or not. The soft starter ensures gentle acceleration and deceleration, reducing risk of product damage due to jerky starts and sudden stops. It also protects the couplings, belts, and bearings against mechanical wear.

The soft starter

- Prevents conveyor belt slap during start
- Reduces stress on counter-balances and weights
- Reduces electrical disturbance on the supply, via a minimum start current function
- Provides protection against accidental running in reverse
- Detects broken couplings or broken belts, and trips the motor immediately
- Detects overload, or a jammed or stalled conveyor, and protects equipment by tripping the motor immediately

Crusher and mill – Mining

Maximise your crusher or mill throughput by installing a soft starter at the motor input. The soft starter allows the motor to operate at its upper thermal limit, while carefully monitoring thermal capacity to ensure motor protection. The crusher can then safely ride through temporary product overload situations

The soft starter

- Eliminates the need for special control equipment, by connecting motor thermistors directly into the MCD 500 thermistor input
- Extends the life of couplings, belts, and bearings by gentle start-up, minimising torque transients
- Reduces electrical disturbance on the supply
- Limits the demand on the supply, especially critical on remote sites supplied by generator sets
- Prevents damage due to unintentional running in reverse, by preventing start when rotation of the 3-phase incoming supply changes
- Detects broken couplings and broken crusher belts via under-current protection, and trips to prevent further damage

Soft starter guide:

Step 1. Determine what kind of speed control you need

Consider first, whether start/stop control or continuous speed control is required. Then consider the scale of both initial investment and running costs.

If you selected a VSD, read more about Danfoss VLT® frequency converters on www.vlt-drives.danfoss.com.
If you selected a soft starter, then read on.

Direct-on-line (DOL) drawbacks

- Wear on motor bearings
- Wear and tear on gearbox
- Water hammer

Step 2. Match your application

Determine the size of the soft starter based on inertia level. Refer to the Soft Starter guide on page 6.

Step 3. Match your needs

Find the right match between your application and the soft starter features you need. The guide recommends which model of Danfoss soft starter is best for the job.

	MCD 100	MCD 201	MCD 202	MCD 500
Power size	0.1-11 kW	7.5-110 kW	7.5-110 kW	7.5-850 kW

VLT® Soft Starter MCD 500

VLT® Soft Starter MCD 500 is a total motor starting solution. Current transformers measure motor current and provide feedback for controlled motor ramp profiles.

AAC, the Adaptive Acceleration Control, automatically employs the best starting and stopping profile for the application. Adaptive Acceleration Control means that for each start and stop, the soft starter compares and adapts the process to the chosen profile best suited to the application.

The VLT® Soft Starter MCD 500 has a four-line graphical display and a logic keypad making programming easy. Advanced setup is possible displaying operational status.

Three menu systems: Quick Menu, Application Setup and Main Menu provide optimum programming approach.

The perfect solution, also for more severe applications:

- Pumps
- Conveyors
- Fans
- Mixers
- Compressors
- Centrifuges
- Mills
- Saws
- And many more

Power range

21-1600 A, 7.5-850 kW
(1.2 MW inside Delta Connection)
Versions for 200-690 VAC

Feature	Benefit
User friendly	
AAC Adaptive Acceleration Control	- Automatically adapts to the chosen starting and stopping profile
Adjustable bus bars allow for both top and bottom entry (360 – 1600 A, 160 – 850 kW)	- Space saving, less cable cost and easy retrofitting
DC injection braking distributed evenly over three phases	- Less installation cost and less stress on the motor
Inside Delta (6-wire connection)	- Smaller soft starter can be selected for the application
Log menus, 99 events and trip log provide information on events, trips and performance	- Eases analysis of the application
Auto Reset	- Less down-time
Jog (slow-speed operation)	- Application flexibility
Second-order thermal model	- Allows motors to be used to their full potential without damage from overloading
Internal bypass contactors (21 – 215 A, 961 A)	- Save space and wiring compared to external bypass - Very little heat dissipates when running. Eliminates costly external fans, wiring or bypass contactors
Auto-start/stop clock	- Application flexibility
Compact size - amongst the smallest in their class	- Saves space in cabinets and other application setups
4-line graphical display	- Optimum programming approach and setup for viewing operational status
Multiple programming setup (Standard Menu, Extended Menu, Quick Set)	- Simplifies the programming, but still holding to maximum flexibility
Multiple languages	- Serving the whole world

MCD 500 operation options

Starting

- AAC Adaptive Acceleration
- Control
- Current Ramp
- Constant Current
- Kickstart

Stopping

- Coast to stop
- TVR soft Stop
- AAC Adaptive deceleration
- Control
- Brake

VLT® Control Panel LCP 501

With the VLT® Control Panel LCP 501 being a full function interface, everything you can do on the VLT® Soft Starter MCD 500 is possible via the LCP 501.

The screen view set-up is selected from 7 standard views and one user programmable.

Language selection

English, Chinese, German, Spanish, Portuguese, French, Italian, Russian.

The LCP 501 is connected to the MCD 500 by using a 3 m cable using 9 pin (D-sub) plug and 3 m cable provided with the IP65 (NEMA 12) door-mount kit.

Once connected, the soft starter asks whether you want to copy parameters from LCP to starter or starter to LCP (if different).

100% easy connection

- The Modbus, Profibus and DeviceNet modules use another port on the MCD 500 (at the side of the soft starter)
- Separate LCP 501 output at the bottom for 9 pin plug and 3 m cable
- One ordering number (LCP with door-mount kit and cable)
- Plug & play connection (also if soft starter is powered up)
- One cable for power and communication
- Powered up by soft starter
- Copy of parameter set-up

Three Adaptive Acceleration Control (AAC) start profiles; early, constant and late acceleration

Constant current/ current ramp – here shown with kickstart

Dimensions

Current rating [A]	Weight [kg]	Height [mm]	Width [mm]	Depth [mm]	Frame size
21, 37, 43 and 53	4.2			183	
68	4.5	295	150	213	G1
84, 89 and 105	4.9				
131, 141, 195 and 215	14.9	438	275	250	G2
245	24	460	390	279	G3
360, 380 and 428	35	689	430	300	G4
595, 619, 790 and 927	45				
1200, 1410 and 1600	120	856	585	364	G5

VLT® Compact Starter MCD 200

VLT® Compact Starter MCD 200 from Danfoss includes two families of soft starters in the power range from 7.5-110 kW.

The series offers easy DIN rail mounting for sizes up to 30 kW, 2-wire or 3-wire start/stop control and excellent starting duty (4 x I_e for 6 seconds).

Heavy starting ratings at 4x I_e for 20 seconds.

Compatible with grounded delta power systems.

The perfect for:

- Pumps
- Conveyors
- Fans
- Mixers
- Compressors
- And many more

Power range

7.5 – 110 kW

Remote operation

Remote operation of MCD 201 and MCD 202 is facilitated by the dedicated remote operator kit.

The operator (IP54/NEMA 12) is mounted on the cabinet front and allows remote control, status indication and motor monitoring of an individual VLT® Compact Starter using RS485 serial communication.

Feature	Benefit
Small footprint and compact size	- Saves panel space
Built-in bypass	- Minimises installation cost and eliminates power loss - Reduces heat build up. Savings in components, cooling, wiring and labor
Advanced accessories	- Allows enhanced functionality
Advanced SCR control algorithms balance output waveform	- Allowing more starts per hour, accepting higher load
Reliable	Maximum up-time
Essential motor protection (MCD 202)	- Reduces overall project investment
Max. ambient temperature 50°C without derating	- No external cooling or oversizing necessary
User friendly	Save commissioning
Easy to install and use	
Easy DIN rail mounting for sizes up to 30 kW	- Saves time and space

Dimensions

Power range (400 V)	7-30 kW	37-55 kW	75-110 kW
Height [mm]	203	215	240
Width [mm]	98	145	202
Depth [mm]	165	193	214

VLT® Soft Start Controller MCD 100

VLT® Soft Start Controller MCD 100 is a cost-effective and extremely compact soft starter for AC motors up to 11 kW, due to a unique semiconductor design.

MCD 100 is a true “fit and forget” product. Selection can be made on the basis of the motor power – exactly as with traditional contactors.

MCD 100 products provide timed voltage ramp up and down. Ramp time can be individually adjusted with rotary switches from 0.4 to 10 seconds.

The start torque can be adjusted from 0 to 85% of the direct on-line torque.

All sizes are rated for line voltage up to 600 V AC.

The perfect for:

- Pumps
- Conveyors
- Fans
- Mixers
- Compressors
- And many more

Feature	Benefit
Small footprint and compact size	– Saves panel space
Selection can be based on motor power	– Easy selection
Universal control voltage	– Simplifies selection – Keeps stock at a minimum
“Fit and forget” contactor design	– Simplifies installation – Reduces required panel space
Reliable	Maximum up-time
Robust semiconductor design	– Reliable operation
Almost unlimited number of starts per hour without derating	– Prevents unauthorized changes
Max. ambient temperature 50°C without derating	– No external cooling or oversizing necessary
User friendly	Save commissioning and operating cost
Easy to install and use	– Saves times
Digitally controlled rotary switches	– Secures precise settings and simplifies installation
Easy DIN rail mounting for sizes up to 30 kW	– Saves time and space

Dimensions

Power range	1.5 kW	7.5 kW	11 kW
Height [mm]	102	110	110
Width [mm]	22.5	45	90
Depth [mm]	123.5	128.1	128

Serial communication

MCD 201, MCD 202 and MCD 500 come with optional plug-in modules for serial communication.

- DeviceNet
- Profibus
- Modbus RTU
- USB

<ul style="list-style-type: none"> ■ The total motor starter solution. ■ Provides advanced control methods for starting and stopping and protection of motor and application 	<ul style="list-style-type: none"> ■ A true “fit and forget” soft starter for DIN rail mount, MCD 100 provides basic soft start and stop function
Concept	
<ul style="list-style-type: none"> ■ Enhanced soft start and soft stop ■ Motor and system protection ■ 7.5-850 kW @ 400 V (21-1600A) ■ 200-690 V mains voltage ■ 110-220 V AC or 24V AC/DC control supply ■ 3-phase SCR control 	<ul style="list-style-type: none"> ■ Soft start ■ Soft stop ■ 0.1-11 kW @ 400 V ■ 208-600 V mains voltage ■ 24-480 V AC/DC control voltage ■ 2-phase SCR control
Start/stop	
<ul style="list-style-type: none"> ■ Adaptive Acceleration Control (AAC) ■ Current limit start ■ Current ramp start ■ Dual parameter function ■ Kick-start ■ Jog 	<ul style="list-style-type: none"> ■ Timed voltage ramp-up ■ Adjustable start torque ■ Selectable kick-start function
<ul style="list-style-type: none"> ■ Adaptive Deceleration Control (AAC) ■ TVR soft stop (Timed Voltage Ramp) ■ Coast to stop ■ DC brake function – three phase ■ Soft brake function 	<ul style="list-style-type: none"> ■ Timed voltage ramp-down
Protection	
<p>Same as MCD 202 and:</p> <ul style="list-style-type: none"> ■ Under current ■ Current imbalance ■ Starter overtemperature ■ Restart delay ■ Warning before trips ■ Adjustable phase imbalance sensitivity <ul style="list-style-type: none"> – Programmable input trip – Individual phase loss trips – Individual shorted SCR trips – Int. bypass relay overload – Int. bypass relay fail ■ Fully adjustable protections ■ Network communication timeout ■ Heatsink overtemperature ■ Battery/clock failure ■ Supply frequency ■ External trip 	
Output	
<ul style="list-style-type: none"> ■ Three programmable output relays: – Programmable analogue output ■ Motor thermistor 	
Control	
<ul style="list-style-type: none"> ■ 8 language graphical display and keypad ■ Quick menu and application menu ■ Buttons for start, stop, reset and remote control ■ Inputs for two- or three-wire control <p>Optional</p> <ul style="list-style-type: none"> ■ Modules for serial communication ■ VLT® Control Panel LCP 501 ■ PC software 	<ul style="list-style-type: none"> ■ Universal two-wire control ■ Programmable via 3 rotary switches
Other features	
<ul style="list-style-type: none"> ■ Bypass up to 961A (500 kW) ■ Configurable bus bars from 360 A and up ■ Operation timers ■ Jog – slow speed operation ■ Auto reset of fault situations ■ Emergency run ■ 99 event log ■ Trip log ■ User programmable metering and monitoring ■ Simulation before connecting line voltage 	<ul style="list-style-type: none"> ■ Extremely robust SCR design for unlimited number of starts per hour, LED indication, IP20

VLT® Compact Starter MCD 201	VLT® Compact Starter MCD 202
Type	
<ul style="list-style-type: none"> ■ A physically compact starter providing basic soft start and stop functionality 	<ul style="list-style-type: none"> ■ Physically similar to MCD 201 but providing enhanced soft start functionality and various motor protection functions
Concept	
<ul style="list-style-type: none"> ■ Soft start ■ Soft stop ■ 7.5-110 kW @ 400 V ■ 200-575 V mains voltage ■ 110-440 V AC or 24 V AC/DC control supply ■ 2-phase SCR control 	<ul style="list-style-type: none"> ■ Current limit start ■ Soft stop ■ Motor protection ■ 7.5-110 kW @ 400 V ■ 200-575 V mains voltage ■ 110-440 V AC or 24 V AC/DC control supply ■ 2-phase SCR control
Start/stop	
<ul style="list-style-type: none"> ■ Timed voltage ramp-up ■ Adjustable initial torque 	<ul style="list-style-type: none"> ■ Current limit start ■ Initial current ramp-up
<ul style="list-style-type: none"> ■ Timed voltage ramp-down 	<ul style="list-style-type: none"> ■ Timed voltage ramp-down
Protection	
	<ul style="list-style-type: none"> ■ Motor overload (adjustable trip class) ■ Excess start time ■ Reverse phase rotation ■ Motor thermistor input ■ Shorted SCR – no start ■ Supply fault – no start ■ Instantaneous overload
Output	
<ul style="list-style-type: none"> ■ One output relay: Line contactor control 	<ul style="list-style-type: none"> ■ Two output relays: – Line contactor control – Run contactor or trip function
Control	
<ul style="list-style-type: none"> ■ Two- or three-wire control ■ Programmable via 3 rotary switches ■ Reset push button <p>Optional</p> <ul style="list-style-type: none"> ■ Modules for serial communication ■ Remote operator kit ■ PC software 	<ul style="list-style-type: none"> ■ Two- or three-wire control ■ Programmable via 8 rotary switches ■ Reset push button <p>Optional</p> <ul style="list-style-type: none"> ■ Modules for serial communication ■ Remote operator kit ■ PC software
Other features	
<ul style="list-style-type: none"> ■ Integral SCR bypass for minimum physical size and heat dissipation during nominal operation ■ LED status indication ■ IP20 (7.5 – 55 kW @ 400 V) ■ IP00 (75 – 110 kW @ 400 V) ■ Protection kit available 	<ul style="list-style-type: none"> ■ Integral SCR bypass for minimum physical size and heat dissipation during nominal operation ■ LED status indication ■ IP20 (7.5 – 55 kW @ 400 V) ■ IP00 (75 – 110 kW @ 400 V) ■ Protection kit available

The vision behind VLT®

Danfoss is a market leader in the development and manufacture of frequency converters – serving new customers daily.

Environmental responsibility

Danfoss VLT® products – considering people and the environment

All production sites for VLT® frequency converters certified to ISO 14001 and ISO 9001.

Danfoss' activities take employees, jobs and the environment into consideration. Production processes produce minimum noise, emissions and other environmental impacts. In addition, Danfoss seeks to protect the environment when disposing of waste and end-of-life products.

UN Global Compact

Danfoss has confirmed its commitment to social responsibility by signing the UN Global Compact. Our subsidiaries are aware of their responsibility with respect to local conditions and practices.

Energy savings through VLT®

The energy saved in the annual production of VLT® frequency converters is as much as that generated by a large power station each year. Improved process control optimises product quality and reduces waste and wear on the production lines.

Dedicated to drives

Danfoss VLT Drives is a global leader in the area of drive engineering and manufacture. In 1968 Danfoss introduced the world's first mass-produced frequency converters for three-phase motors, and since then has specialised in drive solutions. Today, VLT® stands for reliable technology, innovation and expertise for drive solutions within many different branches of industry.

Innovative and intelligent frequency converters

Danfoss VLT Drives, headquartered in Graasten, Denmark, employs 2500 staff for the development, production, consulting, sales and maintenance of Danfoss drive solutions in over 100 countries.

The modular frequency converters are manufactured according to customer requirements and supplied fully assembled. This ensures that every VLT® is a state-of-the-art device when delivered.

Trust the world experts

To ensure the consistent high standard of quality of our products, Danfoss VLT Drives controls and monitors every important product element. The group has its own research and software development department as well as modern production facilities for hardware, power modules, printed circuit boards and accessories.

VLT® frequency converters are used in diverse applications worldwide. The experts of Danfoss VLT Drives support customers with extensive specialised knowledge relating to specific applications. Comprehensive advice and a fast service ensure an optimal solution with high reliability and availability.

A project is only complete when our customers are fully satisfied with the drive solution.
